

PROTEKTOR „GREEN LINE“

BUILDING FOR TOMORROW

**Green
LINE**

Green Line represents intelligent construction with minimal resources –
ecologically sound, technically advanced, and precisely defined.

www.protektor.com

With the Protektor Green Line, we bundle products that set clear standards

For future-oriented construction and
resource-conserving production.

The Protektor Green Line includes products that reflect the Protektor corporate philosophy of conserving resources, using environmentally friendly materials and minimizing environmental impact.

What are the features of the Protektor Green Line profiles?

- ✓ **PVC recycled content of more than 70% (pre-/post-consumer content) or 50% recycled PVC from own production**
- ✓ **Production with at least 50% green electricity (from renewable energies)**

The Protektor Green Line makes our commitment tangible. It stands for well thought-out, responsible solutions – and shows what is important in construction today.

The Protektor Green Line is a central element of our sustainability initiative **“The Green Circle – by Protektor”**. We are already focusing on energy-efficient processes, modern facilities and clear standards – such as our own solar plant at the Gaggenau site.

With the Protektor Green Line, we are taking a consistent approach: transparent, binding and forward-looking.

Green
LINE

Y-Corner bead for interior plaster and exterior render

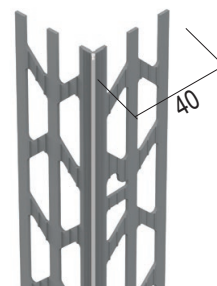

PVC corner profile for plaster thicknesses of 6 mm and greater. For all types of plaster and mortar. With a sealing edge to create precise flush and aligned on the edges of buildings.
